

Fund Objective

The objective of the portfolio is to provide an investment vehicle for investors who want to achieve long term capital appreciation. The portfolio aims to outperform the MSCI Emerging Market Total Return Net Index over a rolling three year period.

Fund Strategy

The portfolio will apart from assets in liquid form, invest in participatory interests of the SIM Global Emerging Markets Fund established under the Sanlam Universal Funds PLC approved by the Irish Regulator. The Sanlam Investment Management Global Emerging Markets Feeder Fund will have foreign exposure of at least 85% at all times. Subject to the investment restrictions, the underlying portfolio will primarily invest in equity securities including equity linked securities such as common stock and preference shares) of companies traded in or dealt on the stock exchanges or regulated markets. The underlying portfolio may, where the Manager considers it in the best interests of the portfolio, invest up to 100% of its net assets in securities traded in or dealt on the stock exchanges or regulated markets considered by the manager to be emerging and frontier markets. The portfolio may also invest in financial instruments for the exclusive purpose of hedging against exchange rate risk.

Tax Free Savings Account

This Fund qualifies as a tax free investment according to section 12T of the Income Tax Act, with effect from 1 March 2015. South African individuals qualify for the associated tax benefits namely no tax on dividends, income or capital gains whilst still enjoying all the benefits of a unit trust. Note contributions to tax free investments are limited to R33 000 per tax year, with a lifetime limit of R500 000. Amounts invested in excess of these permissible thresholds are taxable.

TER	2.98
TC	0.47
TIC	3.45
TER Measurement Period	01 August 2016 - 30 September 2018

Total Expense Ratio (TER) is the percentage value of the Financial Product that was incurred as expenses relating to the administration of the Financial Product. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TER's.

Transaction Cost (TC) is the percentage value of the Financial Product that was incurred as costs relating to the buying and selling of the assets underlying the Financial Product. Transaction Costs are a necessary cost in administering the Financial Product and impacts Financial Product returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Financial Product, the investment decisions of the investment manager and the TER.

Total Investment Charges (TER + TC) is the total percentage value of the Financial Product that was incurred as costs relating to the investment of the Financial Product.

Administered by

Risk Profile

Aggressive

This is an aggressively managed, high-risk portfolio that aims to deliver capital growth over the long term (greater than 5 years). It is designed to substantially outperform the markets and therefore carries a long-term investment horizon (5 years and upwards). The portfolio will be diversified across all major asset classes with significant exposure to equities, and may include offshore equities. There may be some capital volatility in the short term, although higher returns may be expected from five years or beyond.

Risk Considerations

- The fund is focused on investment in global listed companies; accordingly the performance of the fund is directly linked to the performance of the global equity markets.
- Investing in international companies means the currency exchange rate fluctuations will have an impact on the fund's investment performance.
- As the SA Rand can be a volatile currency, this could lead to significant fluctuations in the rand value of this fund.

Glossary Terms

Active Stock-picking Process

This is when asset managers actively and tactically vary their stock selections based on economic and market data, and fundamental valuations, etc. This should lessen an investor's exposure to declining markets and helps preserve capital.

Annualised Returns

Annualised return is the weighted average compound growth rate over the period measured.

Asset Allocation

Asset allocation is the percentage holding in different asset classes (i.e. equities, bonds, property, etc.). It is used to determine the level of diversification in a portfolio.

Capital Growth

Capital growth is the profit made on an investment, measured by the increase in its market value over the invested amount or cost price. It is also called capital appreciation.

Distributions

The income that is generated from an investment and given to investors through monthly, quarterly, bi-annual or annual distribution pay-outs.

Derivatives

Derivatives are instruments generally used as an instrument to protect against risk (capital losses), but can also be used for speculative purposes. Examples are futures, options and swaps.

Feeder Fund

A feeder fund is a South African-based fund that feeds exclusively into its primary foreign-based fund. It allows investors easy access to investing in an offshore fund, eliminating complicated tax and other implications. The shares of the feeder fund represent shares in the primary fund (called a master fund).

Liquidity

The ability to easily turn assets or investments into cash.

Information Ratio

The Information Ratio measures the market risk-adjusted performance of an investment or portfolio. The greater a portfolio's Information Ratio, the better its risk-adjusted performance has been compared to the market in general.

Maximum Drawdown

The maximum drawdown measures the highest peak to trough loss experienced by the fund.

Sharpe Ratio

The Sharpe Ratio measures total risk-adjusted performance of an investment or portfolio. It measures the amount of risk associated with the returns generated by the portfolio and indicates whether a portfolio's returns are due to excessive risk or not. The greater a portfolio's Sharpe ratio, the better its risk-adjusted performance has been (i.e. a higher return with a contained risk profile, where the portfolio manager is not taking excessive risk to achieve those returns).

Standard Deviation

Standard deviation (also called monthly volatility) is a measure of how much returns on an investment change from month to month. It is typically used by investors to gauge the volatility expected of an investment.

Additional Information

All reasonable steps have been taken to ensure the information on this MDD is accurate. The information to follow does not constitute financial advice as contemplated in terms of the Financial Advisory and Intermediary Services Act. Use or rely on this information at your own risk. Independent professional financial advice should always be sought before making an investment decision. The Sanlam Group is a full member of the Association for Savings and Investment SA. Collective investment schemes are generally medium- to long-term investments. Please note that past performances are not necessarily a guide to future performances, and that the value of investments / units / unit trusts may go down as well as up. A schedule of fees and charges and maximum commissions is available from the Manager, Sanlam Collective Investments (RF) Pty Ltd, a registered and approved Manager in Collective Investment Schemes in Securities. Additional information of the proposed investment, including brochures, application forms and annual or quarterly reports, can be obtained from the Manager, free of charge. Collective investments are traded at ruling prices and can engage in borrowing and scrip lending. Collective investments are calculated on a net asset value basis, which is the total market value of all assets in the portfolio including any income accruals and less any deductible expenses such as audit fees, brokerage and service fees. Actual investment performance of the portfolio and the investor will differ depending on the initial fees applicable, the actual investment date, and the date of reinvestment of income as well as dividend withholding tax. Forward pricing is used. The Manager does not provide any guarantee either with respect to the capital or the return of a portfolio. The performance of the portfolio depends on the underlying assets and variable market factors. Performance is based on NAV to NAV calculations with income reinvestments done on the ex-div date. Lump sum investment performances are quoted. The portfolio may invest in participatory interests of other unit trust portfolios. These underlying funds levy their own fees, and may result in a higher fee structure for our portfolio. All the portfolio options presented are approved collective investment schemes in terms of Collective Investment Schemes Control Act, No 45 of 2002 ("CISCA"). The Manager may borrow up to 10% the market value of the portfolio to bridge insufficient liquidity. The fund may from time to time invest in foreign instruments which could be accompanied by additional risks as well as potential limitations on the availability of market information. A feeder fund is a portfolio that invests in a single portfolio of a collective investment scheme, which levies its own charges and which could result in a higher fee structure for the feeder fund. Investments in foreign instruments are also subject to fluctuations in exchange rates which may cause the value of the fund to go up or down. The fund may invest in financial instruments (derivatives) for efficient portfolio management purposes. The Manager has the right to close any portfolios to new investors to manage them more efficiently in accordance with their mandates. Management of the portfolio is outsourced to Denker Capital (Pty) Ltd, (FSP) Licence No. 47075, an Authorised Financial Services Provider under the Financial Advisory and Intermediary Services Act, 2002. Sanlam Collective Investments (RF) (Pty) Ltd retains full legal responsibility for the co-named portfolio. Standard Bank of South Africa Ltd is the appointed trustee of the Sanlam Collective Investments scheme. Sources of Performance and Risk Data: Morningstar Direct, INET BFA and Bloomberg. The risk free asset assumed for the calculation of Sharpe ratios: STEFI Composite Index. The highest and lowest 12- month returns are based on a calendar year period over 10 years or since inception where the performance history does not exist for 10 years. Obtain a personalised cost estimate before investing by visiting www.sanlamunitrustsmdd.co.za and using our Effective Annual Cost (EAC) calculator. Alternatively, contact us at 0860 100 266.

Portfolio Manager Quarterly Comment

Quarter to December 2018

Review

The quarter ended December 2018 saw no respite for investors, with emerging and developed markets down 7.8% and 13.7% respectively. The main contributors to this performance revolves largely over a Fed who continues to signal for more US interest rate increases, be it at a slower pace; continued political uncertainty around the world and ultimately, the realisation that the impact of a trade war between the United States and China, will not be limited to affecting China only.

The fund outperformed during this period as global investors started allocating funds to EM on the back of the solid outlook that EM corporate earnings remains strong and that the growth differential between EM and DM (specifically with the US) will start widening again.

Changes to the portfolio

Market volatility during the quarter, created opportunities for us to initiate a number of new positions; HDFC Bank, a leading private bank in India; and Shriram Transport Finance, the market leader in India in commercial vehicle funding. We also bought Jeronimo Martins, a leading Portuguese retailer with significant operations in Poland; and Swatch, the world's largest watchmaker. We also added to the Fund's holdings in Tencent as we believe current valuation is overly pessimistic regarding their gaming revenues; Yes Bank, a leading Indian bank; and AIA Group, a leading Asian life insurer whose share price was affected by the US-China trade tensions.

We sold our position in the Indian financial company, Axis Bank as the company's share price approached our estimate of its intrinsic value. We also trimmed our holdings in the Brazilian bank Bradesco, the Brazilian retailer, Cia Hering and the Taiwanese semi company, MediaTek.

Performance

Detractors

Brilliance China Automotive: Investors were spooked by the announced change to the BMW-Brilliance JV structure in 2022, with Brilliance's stake being sold down from 50% to 25%. The company also announced earnings that were 24% down YoY, due to increased dealer compensation and the ramp up costs of the X3 SUV. While investors will sit back and watch, the company is still expected to produce 15% earnings growth for the year.

Alibaba Group: Despite the company demonstrating the power of its ecosystem on Singles' Day (11.11), recording US\$30.8bn in merchandise sales and handling 1bn packages through its logistics platform, investors sold down all Chinese companies indiscriminately during the quarter.

Matahari Department Stores: Investors sold down the company on the back of it no longer forming part of the MSCI Indonesia index. The company has initiated a buyback program and will likely be a beneficiary to the Government's increase in social spending budget leading up to the 2019 Presidential elections. We think the company is set to continue growing through the rollout of more stores at regional malls, expansion of its own brand products and as it gains traction with its e-commerce platform.

Contributors

Brazil: With politics finally taking the backseat on the election of a new president, the fundamentals of many of our Brazilian company holdings started to be rewarded by the market and contributed to the fund's outperformance in the quarter.

Matahari Department Stores: Since October, Indonesia has seen its macro environment improve as rate hikes finally brought stability to the weakening Rupiah. Rakyat, a leading Indonesian bank, reported strong loan growth despite a challenging quarter. In an environment of falling credit costs and management's continued strategy to focus on the higher yielding retail loan market, growing fee income and improving efficiency through the use of technology, will see the company's ROE improve and patient shareholders rewarded.

Outlook / a focus on quality

We believe the only way to deliver sustainable outperformance over the long term is to invest in areas which reflect value and are often shunned by the market, and we do this using a bottom-up approach. This approach leads us to invest in companies that can continue to grow despite the prevailing macro climate, which can also entail the returns of the portfolio significantly deviating from the benchmark.

Investors should expect the volatility of 2018 to continue in the context of ongoing US-China trade tensions, slowing US growth and global political volatility.

Amongst the turmoil we find long-term opportunities in EM equities for patient investors. Valuations are very attractive and we are seeing substantial upside in our portfolio of companies.

Predicting the catalyst that will turn the tide is an impossible thing to do, but history has

shown that sentiment can turn very quickly.
