Fund Objective

The objective of the portfolio is to provide long-term capital growth by investing in financial companies from around the world. This feeder fund portfolio primarily invests in participatory interests of the FSCA approved Denker Global Financial Fund, a sub-fund of the Irish domiciled Sanlam Universal Funds plc. The portfolio may also hold ancillary liquid assets including cash and/or money market instruments. The Portfolio may, where the Manager considers it in the best interests of the Fund, invest up to 100% of its net assets in securities traded in or dealt on the stock exchanges or regulated markets considered by the manager to be emerging markets.

Fund Strategy

The fund utilises its database and long experience of the financial sector to invest in financial companies with the search focused on companies that have a good track record of growing their net worth, whilst maintaining the discipline of investing only when they are undervalued.

Why Choose This Fund?

- The fund invests in undervalued financial companies around the world, the research focus being on undiscovered or neglected stocks.
- The fund employs an active stock-picking investment process.
- It is a Rand denominated fund. No foreign exchange tax clearance is required.

TER	2.36
TC	0.01
TIC	2.37
TER Measurement Period	01 October 2021 - 30 September 2024

Total Expense Ratio (TER) is the percentage value of the Financial Product that was incurred as expenses relating to the administration of the Financial Product. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TER's.

Transaction Cost (TC) is the percentage value of the Financial Product that was incurred as costs relating to the buying and selling of the assets underlying the Financial Product. Transaction Costs are a necessary cost in administering the Financial Product and impacts Financial Product returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Financial Product, the investment decisions of the investment manager and the TER.

Total Investment Charges (TER + TC) is the total percentage value of the Financial Product that was incurred as costs relating to the investment of the Financial Product.

Effective 1 December 2024, SCI will change a monthly administration fee of R23 (VAT Inclusive) on retail investors whose total investment value is less than R50 000. Clients with an active recurring monthly debit order will not be levied this fee

*Denker Sanlam Collective Investments Global Financial Feeder Fund.

**The main fund this feeder fund is investing in is a non-distributing fund, hence no income may be available for distribution.

Risk Profile

Aggressive

This is an aggressively managed, high-risk portfolio that aims to deliver capital growth over the long term (greater than 5 years). It is designed to substantially outperform the markets and therefore carries a long-term investment horizon (5 years and upwards). The portfolio will be diversified across all major asset classes with significant exposure to equities, and may include offshore equities. There may be some capital volatility in the short term, although higher returns may be expected from five years or beyond.

Risk Considerations

- The fund is focused on investment in global listed companies; accordingly the performance of the fund is directly linked to the performance of the global equity markets.
- Investing in international companies means the currency exchange rate fluctuations will have an impact on the fund's investment performance.
- As the SA Rand can be a volatile currency, this could lead to significant fluctuations in the rand value of this fund.

Glossary Terms

Active Stock-picking Process

This is when asset managers actively and tactically vary their stock selections based on economic and market data, and fundamental valuations, etc. This should lessen an investor's exposure to declining markets and helps preserve capital.

Annualised Returns

Annualised return is the weighted average compound growth rate over the period measured.

Asset Allocation

Asset allocation is the percentage holding in different asset classes (i.e. equities, bonds, property, etc.). It is used to determine the level of diversification in a portfolio.

Capital Growth

Capital growth is the profit made on an investment, measured by the increase in its market value over the invested amount or cost price. It is also called capital appreciation.

Distributions

The income that is generated from an investment and given to investors through monthly, quarterly, bi-annual or annual distribution pay-outs.

Derivatives

Derivatives are instruments generally used as an instrument to protect against risk (capital losses), but can also be used for speculative purposes. Examples are futures, options and swaps.

Feeder Fund

A feeder fund is a South African-based fund that feeds exclusively into its primary foreign-based fund. It allows investors easy access to investing in an offshore fund, eliminating complicated tax and other implications. The shares of the feeder fund represent shares in the primary fund (called a master fund).

Liquidity

The ability to easily turn assets or investments into cash.

Information Ratio

The Information Ratio measures the market risk-adjusted performance of an investment or portfolio. The greater a portfolio's Information Ratio, the better its risk-adjusted performance has been compared to the market in general.

LISP (Linked Investment Service Provider)

A Linked Investment Service Provider is a financial institution which packages, distributes and administers a broad range of unit trust based investments. Any investment made through these products gives an investor a single point of entry into a selection of different investments.

Maximum Drawdown

The maximum drawdown measures the highest peak to trough loss experienced by the fund.

Money Market Instruments

A money market instrument is a low risk, highly liquid, short-term (one year or less) debt instrument, issued by financial institutions or governments, that tend to have lower returns than high-risk investments.

Participatory Interests

When you buy a unit trust, your money is pooled with that of many other investors. The total value of the pool of invested money in a unit trust fund is split into equal portions called participatory interests or units. When you invest your money in a unit trust, you buy a portion of the participatory interests in the total unit trust portfolio. Participatory interests are therefore the number of units that you have in a particular unit trust portfolio.

Regulation 28

Regulation 28 of the Pension Funds Act sets out prudent investment limits on certain asset classes in investment funds. It applies specifically to investments in Retirement Annuities and Preservation Funds. The allowed maximum exposures to certain asset classes is: 75% for equities; 25% for property; 45% for foreign (offshore) assets.

Sharpe Ratio

The Sharpe Ratio measures total risk-adjusted performance of an investment or portfolio. It measures the amount of risk associated with the returns generated by the portfolio and indicates whether a portfolio's returns are due to excessive risk or not. The greater a portfolio's Sharpe ratio, the better its risk-adjusted performance has been (i.e. a higher return with a contained risk profile, where the portfolio manager is not taking excessive risk to achieve those returns).

Standard Deviation

Standard deviation (also called monthly volatility) is a measure of how much returns on an investment change from month to month. It is typically used by investors to gauge the volatility expected of an investment.

Undervalued Equity Stocks/ Investing in Neglected Global Equities

This is a strategy of selecting shares that trade for less than their intrinsic values. Value investors actively seek stocks that they believe the market has undervalued. They believe the market overreacts to good and bad news, resulting in stock price movements that do not correspond with the company's actual long-term fundamentals. The result is an opportunity for value investors to profit by buying when the price is deflated.

Additional Information

All reasonable steps have been taken to ensure the information on this MDD is accurate. The information to follow does not constitute financial advice as contemplated in terms of the Financial Advisory and Intermediary Services Act. Use or rely on this information at your own risk. Independent professional financial advice should always be sought before making an investment decision. The Sanlam Group is a full member of the Association for Savings and Investment SA. Collective investment schemes are generally medium- to long-term investments. Please note that past performances are not necessarily a guide to future performances, and that the value of investments / units / unit trusts may go down as well as up. A schedule of fees and charges and maximum commissions is available on request from the Manager. Sanlam Collective Investments (RF) Pty Ltd, a registered and approved Manager in Collective Investment Schemes in Securities. Additional information of the proposed investment, including brochures, application forms and annual or quarterly reports, can be obtained on request from the Manager, free of charge. Collective investments are traded at ruling prices and can engage in borrowing and scrip lending. Collective investments are calculated on a net asset value basis, which is the total market value of all assets in the portfolio including any income accruals and less any deductible expenses such as audit fees, brokerage and service fees. Actual investment performance of the portfolio and the investor will differ depending on the initial fees applicable, the actual investment date, and the date of reinvestment of income as well as dividend withholding tax. Forward pricing is used. The Manager does not provide any guarantee either with respect to the capital or the return of a portfolio. The performance of the portfolio depends on the underlying assets and variable market factors. Performance is based on NAV to NAV calculations with income reinvestments done on the ex-div date. Lump sum investment performances are quoted. The portfolio may invest in participatory interests of other unit trust portfolios. These underlying funds levy their own fees, and may result in a higher fee structure for our portfolio. All the portfolio options presented are approved collective investment schemes in terms of Collective Investment Schemes Control Act, No 45 of 2002 ("CISCA"). The Manager may borrow up to 10% the market value of the portfolio to bridge insufficient liquidity. The fund may from time to time invest in foreign countries and therefore it may have risks regarding liquidity, the repatriation of funds, political and macroeconomic situations, foreign exchange, tax, settlement, and the availability of information. A feeder fund is a portfolio that invests in a single portfolio of a collective investment scheme, which levies its own charges and which could result in a higher fee structure for the feeder fund. Investments in foreign instruments are also subject to fluctuations in exchange rates which may cause the value of the fund to go up or down. The fund may invest in financial instruments (derivatives) for efficient portfolio management purposes. The Manager has the right to close any portfolios to new investors to manage them more efficiently in accordance with their mandates. Management of the portfolio is outsourced to Denker Capital (Pty) Ltd, (FSP) Licence No. 47075, an Authorised Financial Services Provider under the Financial Advisory and Intermediary Services Act, 2002. Sanlam Collective Investments (RF) (Pty) Ltd retains full legal responsibility for the co-named portfolio. Standard Bank of South Africa Ltd is the appointed trustee of the Sanlam Collective Investments scheme. Sources of Performance and Risk Data: Morningstar Direct, INET BFA and Bloomberg. The risk free asset assumed for the calculation of Sharpe ratios: STEFI Composite Index. The highest and lowest 12-month returns are based on a calendar year period over 10 years or since inception where the performance history does not exist for 10 years. Obtain a personalised cost estimate before investing by visiting www.sanlamunittrustsmdd.co.za and using our Effective Annual Cost (EAC) calculator. Alternatively, contact us at 0860 100 266.

Portfolio Manager Quarterly Comment

Quarter to September 2024

Market review

Global equity markets continued their strong performance. In Q2, the S&P 500 and MSCI World indices gained 7.4% and 6.8%, respectively, and in Q3 they delivered 5.9% and 6.4% - in US dollar terms. A 0.5% rate cut delivered by a dovish US Fed, continued resilience on high frequency economic data releases and a stimulus package delivered by the politburo in China all contributed to the strong performance. Yields on US government bonds with 10 years to maturity ended the quarter at 3.7% (from 4.5% at the end of Q2), resulting in capital gains for fixed income investors.

At a global equity sector level, utilities (+17.6%), real estate (+16.9%), and financials (+10.7%) were the strongest performers for the quarter. Energy (-2.4%), IT (+1.5%), and communication services (+2.8%) were the weakest performers. Geopolitical tensions remain a concern but have had very little negative consequences for markets.

Portfolio review

The Denker Global Financial Fund A Class returned 10.2% for the quarter versus the MSCI World Financials Index performance of 10.7%. Over one year, the A class of the Denker Global Financial Fund has rewarded investors nicely – gaining 39.7% versus the MSCI World Financials Index performance of 21.8%.

Last month we wrote about the Atlantic hurricane season and its potential impact on the (re)insurance sector. As we write, we have a little over a month left to go until hurricane activity is expected to subside. Atlantic hurricane season runs from 1 June to 30 November and, to date, it has been a busy one. Thankfully, Hurricane Milton - the 13th named storm of the season and the 5th to make landfall this year - changed track at the last minute. This redirection avoided a worst-case scenario of insured losses totalling in the triple digit billion dollars. Milton made landfall near Siesta Keys, Florida and early estimates are for insured losses to be in the \$25-45bn range, according to Moody's RMS Event Response. While this is sadly a devastating loss for those affected, we believe this will be an earnings event for our companies. In times like these, we see the value of the industry and its ability to pay claims quickly and fairly and help claimants to get back on their feet following loss. Additionally, we think this year's hurricane activity (to date) will once again underpin attractive pricing for the (re)insurance industry going forward which, over time, will mean continued attractive margins and shareholder value creation. Kevin O'Donnell, CEO of a long-time holding in the fund, RenaissanceRe, put it well in a recent conference call during the quarter: *"I believe that we were uniquely positioned to execute on this strategy and have constructed one of the most resilient portfolios since I started here at RenRe in 1996. In short, if you have the right tools, it's a good time to be a reinsurer."*

More generally, following on last month's commentary, our companies have performed well operationally over the quarter, and with valuations not showing exuberance relative to our assessment of the companies' prospects creation we remain optimistic that the sector is well positioned to generate solid shareholder value over the years to come.

Over the quarter, some of the key contributors at a stock level were as follows:

- o Bawag Group AG was the fund's largest contributor, gaining 22.6% for the quarter. The shares performed well on the back of excellent Q2 results with stable and strong operating trends, good progress on closing recent bolt-on acquisitions and stronger than expected capital generation which paves the way for further capital returns in the years to come.
- o Two of the funds' Property & Casualty (re)insurers contributed meaningfully to the quarterly performance, with Lancashire Holdings up 19.8% and RenaissanceRe up 22.1%. Both companies produced excellent results, showing strong premium growth, attractive underwriting margins and a confident outlook in their ability to generate high and sustainable returns on equity in the years to come.

The main detractors from performance for the quarter:

- o The largest detractor for the quarter was Mexican bank Regional (-21.9%), mainly on account of investor concern around the transition of power from President Andrés Manuel López Obrador (AMLO) to Claudia Sheinbaum. As AMLO's administration neared its end, there were concerns about potential changes in fiscal and regulatory policies under Sheinbaum, particularly regarding how her government would approach banking sector reforms, public spending, and social welfare programs. Post the transition, Sheinbaum's first speech was well taken by the market as she emphasised, among others, that foreign and domestic investments would remain secure under her leadership, countering concerns about potential instability during the political transition. Shares of Mexican financial intuitions have subsequently rallied over October 2024 to date.
- o LIC Holdings, an Indian mortgage lender, was another large detractor for the quarter (-16.3%). This was largely due to a sharp uptick in expenses reported and, to a lesser degree, a broader sell-off in Indian public sector undertakings.

Changes to portfolio and outlook

The main changes to the portfolio included lightening our position in JP Morgan and Indian lender Shriram Finance, as the shares have run hard of late (+50% and +79% over the past 12 months at the time of writing, respectively). We used the proceeds to increase our positions in EU and UK banks where we currently see more value.

As we highlighted in prior commentaries, our outlook for the sector in general, and our portfolio in particular, remains constructive. As interest rates decline, this should be a

tailwind to the smaller and emerging market exposed companies in the portfolio. Our outlook for bad debts/claims for the banks and insurers in our portfolio is that they will remain manageable, and we expect attractive shareholder value creation to continue through the cycle.

Note: All returns included above are in US dollar terms.
